This project demonstrates not only how the Partnership helps its members, but how their services help the entire community.

A collaborative effort.

The Partnership conducted the RiverBend Area Infrastructure Needs Assessment (RAIN A), with assistance from the University at Buffalo Research and Economic Development Office. The RAINA project engaged the community, surveying neighboring businesses, area developers, and others to collect data on future power needs. National Grid will utilize the data to plot growth areas and prioritize points within the network.

RAIN A is just one example of how the Buffalo Niagara Partnership is committed to deeper engagement with our members and the community. Learn more about what membership can do for your business.
